DETAILED ACTION

Allowable Subject Matter

1. Claims 18-69 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The primary reason for allowance is the newly added limitation that an antiferromagnetic layer magnetically coupled to a free layer of a memory structure applies a non-pinning bias to the free layer. Although the prior art does teach memory structures with an antiferromagnetic layer coupled to a free layer (see U.S. Patent No. 6,341,053 to Nakada et al. or U.S. Patent No. 6,700,760 to Mao), the coupling between the antiferromagnetic layer and the free layer is structured such that the free layer is at least partially pinned, thus increasing the anisotropy of the structure. The present invention, however, rather than partially pinning the free layer, simply provides a compensatory bias, such that the device can be centered near the 'zero magnetic switching field.' Since the present invention provides advantages over the prior art, such as maintaining relatively small MRAM switching currents as well as allowing improved switching reliability, and since the prior art fails to suggest applying a non-pinning magnetic field on a free layer from an antiferromagnetic layer, it is the examiner's opinion that the claimed invention would not have been obvious to a person skilled in the art.
